Abu Naser MD. Arman

mdnaserarman57@gmail.com | +8801877348817 | Dhaka, Bangladesh

Summary

Full Stack Software Engineer with experience in building scalable FinTech and core banking systems using Spring Boot microservices and modern Angular architectures. Currently developing core loan banking modules,including loan product configuration, credit line setup, and loan account opening across both backend and frontend.. Skilled in designing clean backend systems (SOLID, layered architecture, DTO/CQRS patterns) and developing dynamic, data-driven frontend applications. Combines strong engineering practices with hands-on domain knowledge of core banking operations, enabling more accurate, business-aligned system design. Proven ability to optimize performance, improve API reliability, and deliver production-ready enterprise solutions.Skilled in designing event-driven pipelines, integrating third-party services, optimizing database workflows, and collaborating with cross-functional teams. Strong adaptability to any stack with a focus on writing clean, maintainable, production-ready software.

Experience

Junior Software Engineer — *LEADS Corporation Limited — January 2026 – Present*

- Designed and developed core loan banking modules including loan product configuration, credit line setup, and loan account opening workflows using Spring Boot microservices.
- Modeled complex loan account lifecycle logic (product-to-account linkage, credit line allocation, account status transitions) to align with real-world lending business rules.
- Acquired functional domain knowledge of core banking/lending operations (loan products, credit lines, account origination) and applied it directly to shape backend data models and business logic, reducing rework from misaligned requirements.
- Developed and optimized enterprise-grade backend services for a FinTech Loan Origination System (CredGen) using Spring Boot and microservices architecture.
- Improved backend efficiency by refactoring repeated conversion logic into reusable Mapper components using Spring Dependency Injection, increasing maintainability and testability.
- Applied layered architecture (Controller → Service → Repository) to enforce clean separation of concerns across multi-module services .
- Designed and implemented DTO-based command/query flows (CQRS-style), ensuring clear API contracts and improved data handling.
- Optimized complex product configuration workflows by structuring aggregation of domain entities into scalable service logic.
- Enhanced API reliability by resolving ambiguous route mappings and standardizing RESTful endpoint design.
- Used Spring Data JPA with composite key handling for complex financial domain models.

Tech: Java, Spring Boot, Microservices, Oracle, Spring Data JPA,

- Built scalable frontend architecture using Angular (Standalone Components, Signals, Reactive Forms) for complex financial workflows.
- Developed dynamic, data-driven UI handling nested financial configurations such as repayment schedules, interest/profit logic, and penalties.
- Implemented real-time interactive grids for financial data manipulation (charges, GL mappings, repayment structures).
- Engineered robust frontend-backend data synchronization with custom DTO mapping and JSON transformation for complex nested payloads.

Tech: Angular, TypeScript,Tailwind CSS

Junior Full Stack Developer — *Workspace Infotech Limited — April 2025 – December 2025*

- Developed Python-based applications and APIs with a focus on scalability, performance, and event-driven design.
- Optimized database queries using Django ORM techniques reducing query count by 60% and improving API response time by 40%

- Integrated multiple cloud provider APIs (Vultr, UpCloud) with unified data models and real-time resource availability validation
- Enhanced API response structure by enriching UpCloud data with local database records, reducing frontend API calls by 50%
- Implemented Firebase FCM real-time notifications; reduced processing time by 50%.
- Implemented signal-based logging, **RabbitMQ** messaging, and event-driven workflows.
- Designed optimized PostgreSQL queries decreasing API response time from 420ms → 190ms.
- Reduced API response time by 40% through singleton pattern implementation for ML model loading, eliminating per-request model initialization overhead.
- Optimized Docker build times by using strategic layer caching and pip cache mounting
- Created bulk data import system with CSV parsing, transaction management, and atomic rollback handling for 10,000+ records
- Built **ETL scripts** for data validation, duplicate detection, and batch processing..
- Implemented parallel image preprocessing pipeline with 4 variants, improving OCR accuracy by 25
- Optimized YOLO inference with adaptive thresholding for real-time medicine detection
- Created a full detection pipeline using **YOLO** and **CLIP embeddings** via Streamlit.

Tech: Python, Django, DRF, Streamlit, PostgreSQL, RabbitMQ, Firebase, Git

Web Development Intern *Smile Care BD — Feb 2025 – March 2025*

- Built dynamic CMS with Laravel and MySQL powering 10k+ monthly visitors.
- Built admin panel with authentication and CRUD operations.
- Collaborated with non-technical stakeholders ensuring smooth release cycles.

Tech: PHP, Laravel, MySQL

Education

American International University-Bangladesh (AIUB) *2025*
BSc in Computer Science and Engineering (CSE) **CGPA: 3.87/4.00**

Projects

MusicPlaylist (API) *January 2025*
GitHub: github.com/NaserArman22/MusicPlaylist
RESTful API for managing playlists with layered architecture following SOLID principles.
Tech: .NET MVC, Web API, Postman

Volunteering

AIUB Volunteer Unit — Assisted convocation, admissions, and international conferences.
AIUB Social Welfare Club (Shomoy) — Organized national charity and relief programs.

Skills

Languages: Java, Python, TypeScript, JavaScript, C++, Csharp, PHP
Backend: Spring Boot, Django, DRF, Microservices, REST APIs
Frontend: Angular (Signals, Standalone), Next.js, Tailwind CSS
Databases: Oracle, PostgreSQL, MySQL, SQL Server
Tools: Git, Postman, Firebase, RabbitMQ
Concepts: SOLID, CQRS

Awards

Dean's List (4+ times)
Academic Scholarship Recipient (2022–2025)
Second Highest Academic Distinction (Cum Laude)

Languages

Bangla (Native)

English (Professional Working Proficiency)
